

Example 1: [Citibike](#) (Buckwick)

Example 2: Power Lines (Buckwick)

Example 3: 5g Tower (Buckwick)

Within a few blocks of my apartment/subway stop, I was able to find many examples of infrastructure. I decided to include a variety of examples, including electricity lines, a Citi bike station, and what I presume to be a cell tower. The Citi bike may be a stretch, although I would consider it a new form of transportation infrastructure in NYC. Additionally, countless Citi bike stations create a network of stations. The power lines and cell towers are pretty clear examples of networked infrastructure since the power lines connect to endless other power lines creating a massive network of energy transport. I believe that the cell tower is connected to satellites, which then connects to other cell towers, creating a massive network of interconnectivity.
